To modify values in TSP GA:

In file TSP.cpp:

Ctrl+F and write "user values". Under the title there are user values to edit, edit them as you wish

```cpp
//------------------------------------------User values------------------------------------------//
unsigned int population_size = 1024;
double crossover_prob = 1;
double mutation_prob = 0.01;
unsigned int record_data_per_generations = 20; //Per how much generations to record data
unsigned int generation_limit = 1000; //After how much generations program terminates
//------------------------------------------------------------------------------------------------//
```

To modify values in 8QUEEN GA:

In file 8Queen.cpp:

Ctrl+F and write "user values". Under the title there are user values to edit, edit them as you wish

```cpp
//------------------------------------------User values------------------------------------------//
unsigned int population_size = 1024;
double crossover_prob = 0.8;
double mutation_prob = 1;
unsigned int record_data_per_generations = 20; //Per how much generations to record data
unsigned int generation_limit = 1000; //After how much generations program terminates
//------------------------------------------------------------------------------------------------//
```
